#### **DETAILED ACTION**

# Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Blouch et al. (US 5,402,034).

Blouch discloses (fig 1) an image intensifier tube with a housing which holds a photocathode and a screen, with a microchannel plate supported in a recess in the interior surface of the collar which is also held in the housing by a peripheral retention member.

Regarding claims 2-6, the collar has an annularly shaped base and a first cylindrical member disposed perpendicular to the base having interior and exterior surfaces, and the recess for holding the microchannel plate is in the interior surface of

Application/Control Number: 09/641,685

Art Unit: 2879

the cylindrical member and an annular flange at the end of the second cylindrical member which extends in a direction away from the platform.

Claims 1-6 and 9-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Vrescak et al. (US 6,040,657).

Vrescak discloses (fig 2) an image intensifier tube with a housing which holds a photocathode and a screen, with a microchannel plate supported in a recess in the interior surface of the collar which is also held in the housing by a peripheral retention member.

Regarding claims 2-6, the collar has an annularly shaped base and a first cylindrical member disposed perpendicular to the base having interior and exterior surfaces, and the recess for holding the microchannel plate is in the interior surface of the cylindrical member and an annular flange at the end of the second cylindrical member which extends in a direction away from the platform.

Regarding claim 9-11, the output contact support member has a first surface parallel to the microchannel plate on which the bottom of the microchannel plate rests, a second portion perpendicular to the first surface which extends in a direction away from the microchannel plate, and a third portion parallel to the first surface which extends towards the outside of the tube and a ceramic ring.

# Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Application/Control Number: 09/641,685

Art Unit: 2879

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 7-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vrescak et al. (US 6,040,657).

Vrescak discloses all of the above claim limitations but fails to clearly point out the collar being welded to the platform and locking tabs.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to choose the most appropriate known securing means since it would be within the general skill of a worker in the art to select a securing means on the basis of its suitability for the intended use.

## **Contact Information**

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ken A Berck whose telephone number is (703)305-7984. The examiner can normally be reached on Mon-Fri 8:30-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nimesh Patel can be reached on (703)305-4794. The fax phone numbers for the organization where this application or proceeding is assigned are (703)308-7382 for regular communications and (703)308-7382 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703)308-0956.
